

AAYUSH NEGI

negiaayush0302@gmail.com | GitHub | LinkedIn

Professional Summary

Future-ready Computer Science Engineer with a knack for analytical problem solving, scalable systems, and innovative project execution. Experienced in full-stack development, AI/ML-integrated systems, and decentralized architectures.

Education

Jaypee Institute of Information Technology

2023 - 2027 (Expected)

Bachelor of Technology in Computer Science and Engineering

Mamta Modern Senior Secondary School

2021 - 2023

CBSE Higher Secondary Education (Class X - XII)

Experience

AI/ML Intern - AML Enterprises (Hybrid)

Jun 2026 - Jul 2026

Internship supporting documents

Claim Management Live Agent - Voice-first insurance claim intake system

- Built a voice-first insurance claim intake system using Gemini Live, Google ADK, FastAPI, and WebSockets, enabling claimants to speak naturally while the application maintained a real-time transcript and structured claim state.
- Developed an ADK-based claim processing workflow using Gemini 3 Flash and structured extraction to convert conversational claim descriptions into fields such as policy number, loss type, date, location, evidence, and report numbers, while continuously flagging missing or uncertain information.
- Implemented deterministic insurance business rules with Python FunctionNodes and Pydantic for missing-field validation, evidence/document checks, safety and SIU signals, claim routing, and adjuster-ready handoff packet generation during the live conversation.
- Integrated the live frontend with a FastAPI/WebSocket backend, separating audio transport from the core root_agent workflow so each claimant turn triggers classification, validation, routing, and claim-state updates without duplicating business logic.

AAYUSH NEGI

Projects

Orion - AI-Powered Browser IDE

Next.js, TypeScript, Convex, Vercel AI SDK, CodeMirror, WebContainers

- Primary contributor to agent orchestration in a team-built browser IDE for conversational web development.
- Implemented routing, tool execution, shared context, workflow sequencing, and error handling with support from teammates.
- Collaborated on integrating agent workflows with the wider editing and preview experience.

FaceAuth - Decentralized Facial Authentication

Python, Django, face_recognition, dlib, Web3, Ethereum, Ganache, Truffle

- Developed a local authentication prototype combining password verification and facial recognition.
- Connected a Django API and browser webcam interface with facial encodings generated using face_recognition and dlib.
- Integrated an Ethereum smart contract to store credential hashes on a local Ganache network.

JoPro

C, Standard Libraries, Linux

- Developed a modular system utility tool in C implementing custom random-number generation and optimized character comparison logic.
- Designed the greater() function to evaluate ASCII character ordering, successfully eliminating edge-case comparison overheads.

Skills

Languages: C, C++, SQL, Python, HTML, CSS, JavaScript, TypeScript

Frameworks & Libraries: React.js, Next.js, Flask, FastAPI, CodeMirror, Cryptography, Pydantic OpenCV, Web3.js, Node.js

Tools & Cloud: Git, GitHub, Linux, Vertex AI, Clerk, Convex, Firecrawl, WebContainers, Google ADK, Gemini API, WebSockets

Core Domains: Data Structures & Algorithms, Machine Learning, Web Development, Decentralized Identity (DID), Conversational AI Systems
